

## Eco Friendly Process

One of the greatest features of ClearBlu's dumpster and trash bin cleaning service is that the cleaning process is accomplished with high pressure wet steam. It usually requires no chemicals and it generally takes less than 60 seconds to sanitize the inside of a ten yard dumpster.

This process is unparalleled. No other approach is as efficient or cost effective.

## Other Capabilities

Cleaning of Entrances and Walkways.

Exterior Window Washing.

Degreasing and Sanitation of Commercial Kitchen Floors Walls and Appliances.

Deep Cleaning and Disinfection of Bathrooms Top to Bottom Including Drain Pipes Using Wet Steam and High Flow Fluid Extraction.

Steam Disinfection of all Tables and Chairs.

Athletic Track Cleaning.

## Proudly Serving the Greater Yellowstone Area

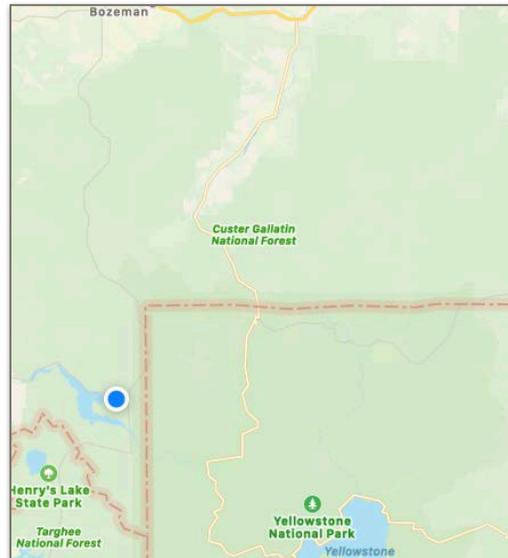

### A service needed everywhere.

Trash bin cleaning is a concept first introduced in Europe. While it is quickly becoming standardized there, it is still in its infancy here. However, as more people become aware of the service, more people will begin to see its benefits.

### A service with children in mind.

I remember it well. To board the school bus from elementary we had to walk past the school cafeteria's dumpsters. The combination of rotting milk, decaying food and other waste is a memorable smell. Worse was the sticky sludge draining from the dumpsters that we would often walk through on our way to the bus.

While your facility may not incorporate such design, faculty and students do come into contact with dumpsters. Most of us don't realize that when we touch a dumpster we become potential carriers of any harmful bacteria and viruses growing therein. When we walk back in to the school facility we bring those things with us.

What can  
**ClearBlu**  
do for you?

## ClearBlu Can Clean Your Dirty Trash Bin or Dumpster.

### What's That I See?

While this is a picture of a very dirty trash bin, it catches the essence of what a frequently used dumpster can also look like inside.

Worse than what's seen is what's unseen. Dumpsters

are teeming with disease causing viruses like E. Coli, salmonella, listeria and H. Pylori. Even more alarming is the proven presence of antibiotic resistant bacteria

that were once thought to exist primarily in healthcare facilities.

### I See Clean!

By definition, an object that is "clean" is an object that is free of unwanted matter. The image to the left is not a new trash bin, it's the same bin pictured above except it's

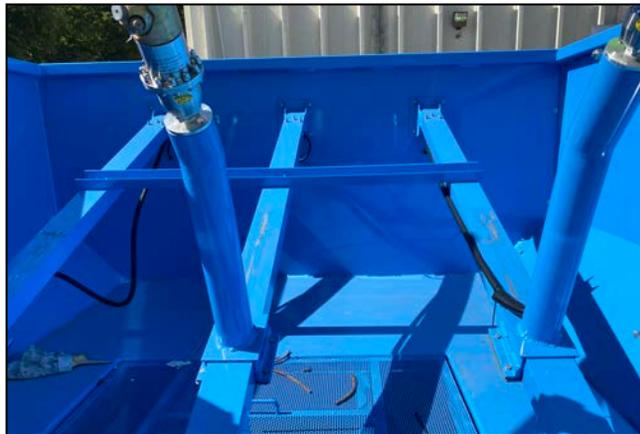

free of unwanted matter. In other words, it's clean!

**Never Touch  
A Dirty Dumpster  
Again**

### Steam Power

Nothing cleans and disinfects better than steam! Steam lifts stains, dissolves grease and grime, destroys odors and kills germs in seconds...without having to add any potentially harmful cleaning or disinfecting ingredients. ClearBlu Services has harnessed this power to direct it to where you need it; your dirty trash bin or dumpster.

### Self Contained Hopper

One unique feature of ClearBlu's dumpster cleaning equipment is that it is all self-contained. In addition to the equipment needed to heat and pressurize water

are two storage tanks. One storage tank holds clean water, the other holds the recovered wash water. Most bins and dumpsters can be lifted into the onboard hopper where it is cleaned. Roughly 90% of the water used during the cleaning process is directed to the bottom of the hopper and collected in the onboard grey water tank. Once collected, this water can be offloaded at the appropriate water treatment facility.
